

# Section<sup>®</sup> Three

By WINFIELD

New formulation for more convenient control of emerged grass weeds in soybeans, alfalfa, cotton and other crops

## Postemergent Control of Grasses

Section<sup>®</sup> Three herbicide controls a broad spectrum of emerged annual and perennial grass weeds and is safe to apply over the top of broadleaf crops. It provides fast control of annual grass weeds, volunteer corn, and volunteer cereals, and has exceptional compatibility with Cornerstone<sup>®</sup> brand herbicides for convenient and effective applications to glyphosate tolerant soybeans.

Section<sup>®</sup> Three: Same great fast acting grass control but less storage and handling.

Section<sup>®</sup> Three herbicide contains 3 pounds of clethodim per gallon, which is 50% more active ingredient per gallon than Section<sup>®</sup> 2 EC herbicide. This new formulation offers less storage and handling throughout the year while maintaining the same great annual and perennial grass weed control, usability and mixing compatibility.

Section<sup>®</sup> Three at 4 fl oz/A  
11 days after treatment

Section<sup>®</sup> 2 EC at 6 fl oz/A  
11 days after treatment

## Application

Section<sup>®</sup> Three Rates: 2.67-10.67 fl oz/A

### Volunteer Corn

- Up to 12" = 2.7-4 fl oz/A
- Up to 24" = 4-5.3 fl oz/A
- Up to 36" = 5.3-6.7 fl oz/A

### Annual Grasses

- Up to 12" = 4-6.7 fl oz/A

### Perennial Grasses

- Up to 12" = 6.7-10.67 fl oz/A
- Two applications needed

### Adjuvant Rates:

Destiny<sup>®</sup> HC or Superb<sup>®</sup> HC<sup>1</sup>

- 1 pt/A or 0.5% v/v

InterLock<sup>®</sup>

- 4-6 fl oz/A

<sup>1</sup> Do not use less than 1 pint of oil per acre by air.

# Section<sup>®</sup> Three

By WINFIELD

## A Great Tank-Mix Partner with Excellent Crop Safety

Section<sup>®</sup> Three herbicide has a wide application window, which allows for outstanding application flexibility. It can be tank-mixed with many other herbicides, insecticides, and fungicides such as: Avalanche Ultra<sup>®</sup>, Cornerstone<sup>®</sup> 5 Plus, Delta Gold<sup>®</sup> and Tundra<sup>®</sup> Supreme. It is also compatible with WinField<sup>™</sup> MAX-IN<sup>®</sup> micronutrient products and can be applied by ground or air.

## Ingredients

Clethodim	36.7%
Other ingredients	63.6%
TOTAL	100%

Section<sup>®</sup> Three herbicide contains 3 pounds active ingredient per gallon.

## Section<sup>®</sup> Three Needs an Adjuvant for Maximum Effectiveness

Section<sup>®</sup> Three herbicide requires an adjuvant for effective control of grass weeds. For most circumstances it is recommended that Section<sup>®</sup> Three herbicide be tank-mixed with a high surfactant oil concentrate adjuvant such as Destiny<sup>®</sup> HC (MSO) or Superb<sup>®</sup> HC (COC). It is important to consider local field conditions to determine which adjuvant is best for each application.

To lock in spray coverage, ensure consistent deposition, and lock out drift, include InterLock<sup>®</sup> adjuvant in the tank.
